VARIABLE-SPEED V-BELT DRIVE WITH A WIDE RANGE OF CONTROL (Klinoremennoy Variator s Shirokim Diapazonom Regulirovaniya). Sep 60 [6]p. 4 refs. RTS 1160.

Order from LC or SLA mi\$1.80, ph\$1.80 61-13221

Trans. of Vestnik Mashinostroyeniya (USSR) 1958, v. 38, no. 8, p. 27-29.

A V-belt type variable speed transmission developed at the Odessa Technological Institute is described which has a wider range of speed adjustment, within the same bulk, than known types. The basic design consists of a spur gear differential train wherein the two parallel input branches are V-belt driven from the same motor shaft. Each V-belt transmission has driven and driving pulleys of variable width. The two transmissions are adjusted by a handwheel through a screw mechanism. The adjustment is differential. Therefore, the output shaft of the differential gear train has a range of speed (Machinery--Machine Parts, TT, v. 5, no. 4) (over)

Order from LCo or SLA mi\$2.40, ph\$3.30 61-13890

Trans. of Beton i Zhelezobeton (USSR) 1958, no. 3,
p. 107-111.

Experiments indicated that cracks begin to develop in
bent concrete sections when stresses reach the critical
strength in the longitudinal direction. The load
which causes the appearance of cracks, in a single
static distribution, is not a breaking load and the
critical equilibrium is reached only after a signifi-
cantly increased load is exerted. The difference be-
tween the conventional critical strength under ex-
centric loads and in the axial elongation is determined
(Materials, TT, v. 5, no. 4) (over)
